## CYCLOTHERMIC WOOD OVEN

- External dimensions (cm) : 55x50x70h
- Internal oven dimension (cm): 44x45x30h

## FORNO BASE STARFIRE

Metal wood oven BASE STARFIRE with innovative design and robust construction. The cyclothermal wood oven has two independent chambers. A wood burning chamber at the bottom and a two-place roasting chamber at the top. Model that can be lined around the perimeter.

It works with wood whose fire heats the floor and the perimeter of the furnace chamber, as the exhaust gases are circulated in a circular direction towards the chimney outlet at the top.

The combustion chamber is lined with firebricks on the floor and perimeter. It has a door with hinges that opens to the side to supply wood, air intake fittings for complete control of the intensity of the fire and a cold handle to secure the door.

The cooking chamber at the top has a door with hinges which opens to the side. It has ceramic inspection glass, thermometer to control the internal temperature of the oven and a cold handle that secures the door. Internally it has two cooking places for simultaneous cooking of different foods. The bottom is lined with firebrick. With internal dimensions 44x45x30h (cm) it can hold up to two baking trays and is suitable for baking all your favorite recipes.

By injecting wood into the combustion chamber we can fluctuate the temperature of the oven or keep it constant as with the thermometer it has we know at all times the internal temperature of the chamber. Without electricity and with little wood it can give unique moments to you and your friends.

In the cyclothermal wood oven STARFIRE has incorporated all the experience it has gained in its 45 years of operation in garden products.
